|---------------|---|
| Model No.:    | KW9025, 47020RX   |
| Power supply: | DC 3.0V (2x1.5 "AAA" Size)  |
| Remark:       | Only the model KW9025 was tested.  KW9025, 47020RX are identical in the same PCB layout, interior structure and electrical circuits. The only differences are the model name and appearance color for commercial purpose. |
|               | 2. The test battery is new battery.   |

### 5.3 Test mode and voltage

| Test mode:    |  |
|---------------|--|
| Receiver mode | Keep the EUT in receiver mode  |
| Remark:       | Signal generators transmit an unmodulated carrier on the receiver frequency from an antenna in the proximity of the receiver. Care was taken to avoid overload of the receiver, vary the amplitude and frequency of the stabilizing signal to obtain the highest level of the spurious emissions from the receiver |

| Test Procedure:       | <ul> <li>a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.</li> <li>b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</li> <li>c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</li> <li>d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> <li>f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or</li> </ul> |             |    |             |         |                  |  |
